We hereby announce that Takahama unit no.3 (pressurized water reactor, rated electric output: 870MW, rated thermal output: 2,660MW), which has been under the 21st periodic outage inspection since February 20, 2012, is expected to start up on January 29 and reach the criticality on January 30, 2016.

After reaching the criticality, the plant will start power control operation on February 1st as the final stage of the periodic outage inspection following various types of tests. At the end of February, the plant will restart full-scale operation after the completion of the comprehensive inspection performed by the Nuclear Regulation Authority.

* This schedule may change depending on the result of the ongoing inspection by the Nuclear Regulation Authority.
