

Start of Power Generation at Takahama Unit No. 4

May 22, 2017

President and Director, Shigeki Iwane

The Kansai Electric Power Co., Inc.

We hereby announce that Takahama Unit No.4 has started power generation at 14:00 today.

It is planned to increase the generator output in a stepwise manner while confirming the plant status at each power output. Meanwhile, we will take sincere and deliberate actions on a continuous basis to support the inspections to be performed by the Nuclear Regulation Authority. With a strong resolve to pursue the nuclear safety, we will make a company-wide effort to make steps forward carefully with maintaining an atmosphere of tension while giving top priority to safety.
